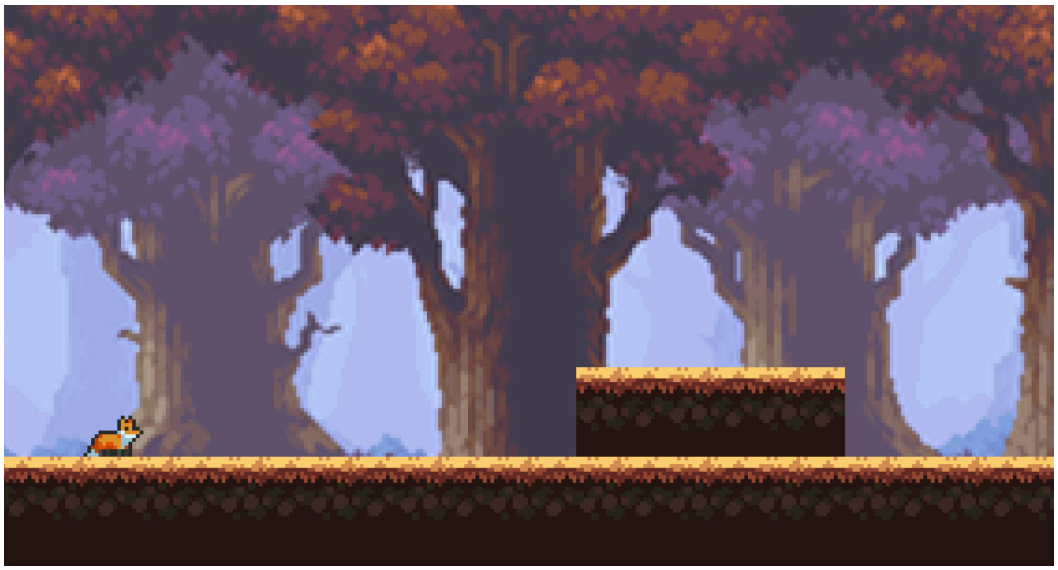
Process & Decision Documentation

Project/Assignment Decisions

- Added a sound effect when the user makes a jump
- Added background music to match the ambiance of the environment, triggered by the click of a mouse

Role-Based Process Evidence



- Sound works after trial and error

Entry Header

Name: Jenny Dang

Primary responsibility for this work: Add sound/effects to the code

Goal of Work Session

- To add sound/effects

Tools, Resources, or Inputs Used

- GenAI tools (ChatGPT 5.2)
- Code by Dr. Karen Cochrane and David Han

GenAI Documentation

Date Used: March 9, 2026

Tool Disclosure: ChatGPT 5.2

Purpose of Use: Help edit code and comments to add sound to the game

Summary of Interaction: The tool helped me to add sound files to the game, making it more entertaining

Human Decision Point(s): I overruled when the sound was not working properly and the sound effect was not working when the user made a jump. I fixed this by going over the code and finding the errors.

Integrity & Verification Note: I checked for accuracy by testing the game in a live server.

Scope of GenAI Use: GenAI did not contribute to my prompts and my decision-making.

Limitations or Misfires: The tool misunderstood where to place the sound effect when the user jumps/

Summary of Process (Human + Tool)

- Testing and revising
- Prompting ChatGPT
- Picking the right sound
- Reiterating the GenAI to get the correct outcome

Decision Points & Trade-offs

- I considered which sound effects were suitable for the game

Verification & Judgement

- Playtesting on a live server

Limitations, Dead Ends, or Open Questions

- At first, the sound was not working because I didn't add the correct code in the index
- Next time, I could make a button where you can mute the background music
